Each Worker Loses 9 Days Yearly by Illness

Lack of Attention to Principles of Modern Industrial Hygiene Responsible for Present Enormous Waste in Our Factories

In these days of great industrial activity much work has been given in this country to the idea of the worker as a menacing factor, and often we consider that the vital resources of our country are for times, for health. To make the average worker more healthy is a matter of great importance. It has been shown that the average worker who is healthy is a more productive worker than the one who is ill. It has been estimated that the average worker who is healthy is able to produce 30% more than the one who is ill. In fact, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill. In those States where a worker's compensation act is in force, the average worker who is healthy is able to produce twice as much as the one who is ill.
